**SURFACE PREPARATION**

Remove grease, oil and other contaminants preferably by using Bison Degreasing Solvent. Blast clean to a minimum of Sa 2 1/2, Swedish Standard SIS 05 5900. For severe corrosive conditions blast to Sa 3 with a surface profile not exceeding 35–40 microns.

Special care must be taken on weld areas to remove flux and spatter. Welds should be ground back to avoid pockets where corrosion can occur. The cleaned surface should be coated before it becomes contaminated.

**APPLICATION**

Stir the base thoroughly and then mix three parts base and one part catalyst by volume to uniform consistency.

**Brush** : Apply without thinning.

**Conventional Spray** : Normally no thinning is required. However, addition of Thinner 844 upto 5% is recommended for ease of application. Use any standard equipment at an atomising pressure of 3.5–4.2 Kg/cm<sup>2</sup>.

**Airless Spray** : Apply without thinning. Use any standard equipment having pump ratio 30 : 1. Tip size 0.38–0.48 mm. Tip pressure 110–160 Kg/cm<sup>2</sup>.
